

Olaf Streit, Executive Sales Director
Asia-Pacific @ AUCOTEC

Digitization has recently become significantly more important. This dire Covid-19 pandemic is a driving force for digitization as the ability to work consistently in a globally distributed manner on a joint project & a web-based overview of project progress for everyone responsible are more important than ever. These are the basic principles of AUCOTEC's platform Engineering Base (EB), which are particularly relevant in times

Covid-19 fast-tracking adoption of technology already on the way

of compulsory working from home allowing to have the Collaborative, Multitasking & Multidiscipline working on the Engineering solution.

Need for collaboration and streamlined processes will drive digitization

Some of the current work scenarios & team collaboration technologies will be much more important even in the post COVID era compared to the past. The need for better organization, streamlined processes and tracking of work progress to be always up-to-date are the key factors that will drive the usage of digitization. Paper & other conventional formats, even proprietary CAD formats will be replaced as the density of information doesn't match what is requested for reliable decisions. It will just speed up things which are already "on-the-way". The modern era

Dileep Misikin, Director, ULESSPL
(Aucotec-India)

will see the entire plant documentation as built on mobile platform as supported by EB & enabled to write markups on the documentation which allows the field teams not to worry to have up-to-date documentation. ■
